**Subject:** FBC Comment 1

Please see the attached public comment regarding the FBC. Thank you. Ed Frank

After reading the Fire Department's letter posted on the TNC website, and looking at the photo of the ladder truck in the letter, makes me wonder even more why the FBC consultants did not recommend that the overhead electric power lines be buried when the streetscape renovations were undertaken.

Did the FBC consultants contact the Fire Department to ask if there were any concerns about a ladder truck extending its ladder towards various building floor levels in view of possible interference with the overhead electric power lines. If the Fire Department was contacted by the FBC consultants during their analysis, what was the Fire Department's reply.
