NEW CASTLE IS A CLEAN ENERGY COMMUNITY!

Buildings are the **single largest source of energy use in New York State!** The poorest performing buildings typically use several times more energy than the best performing buildings, for the exact same building use. In order to account for and improve municipal energy use savings, the Town of New Castle participates in the New York State Energy Research and Development Authority (NYSERDA) Clean Energy Communities Benchmarking Program. The Benchmarking Program tracks Town-owned and occupied building energy use through the Town's online Energy Star Portfolio. Collecting, reporting, and sharing Building Energy Benchmarking data on an annual basis allows municipal officials and the general public access to information about the energy performance of municipal buildings. Building Energy Benchmarking promotes public health, safety, and welfare by making actionable information on municipally owned building energy use available so that opportunities to cut costs and reduce pollution can be identified throughout the Town and beyond, benefitting future generations of residents.

On an annual basis, the Development Department gathers Building Energy Benchmarking data to track the energy efficiency efforts of municipal buildings. A building will qualify for the Benchmarking Program if it is owned or occupied by the Town, greater than 1,000SF in size and is enclosed. The data tables below reflect the Town's building energy use as dictated in the following parameters: *summary statistics* for all buildings that qualify for the Benchmarking Program, *individual statistics* for each covered municipal building, the *status of compliance* with the requirements of the Town's Policy on Benchmarking, the *building address*, the *building primary use type*, *gross floor area*, an *annual summary* of statistics that include *site Energy Usage Intensity (EUI)*, *Weather Normalized Source EUI*, *annual Green House Gas (GHG) emissions*, an *Energy Performance Score* (where available), and a *comparison of annual summary statistics* across calendar years for each year since annual reporting began, this year. The tables below reflect all of the aforementioned datasets.

2017 Summary Statistics on Energy Consumption for Covered Municipal Buildings					
Property Name	Compliant with Local Law	Year of Data	EUI (kBtu/ft)	Source EUI (kBtu/ft)	Total GHG Emissions (Metric Tons CO ₂ e)
All Covered Municipal Buildings	Yes	2017	145.7	328	1580.7
